

PATIENT PRESENTING CLINICAL SIGNS

Stoney Avery History: Inappetence, diarrhea.

SPECIES Physical Examination: N/A.

Canine Urinalysis: N/A.

CBC: Normal.

BREED Serum Biochemistry: Low urea.

Irish Water Spaniel Radiographic Findings: N/A.

SEX ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

MN *Urinary System*

Age Full urinary bladder with a normal thickness and appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

9 years

WEIGHT Normal trigone area, proximal urethra, and iliac blood vessels.

33 kg Normal iliac lymph nodes. Ureters not visualized.

Normal renal size, echogenic appearance, cortico-medullary differentiation, pelvis, and capsule.

INTERPRETED BY *Reproductive System*

Remo Lobetti, BVSc, MMedVet (Med), PhD, Dipl. ECVIM
N/A.

Adrenal Glands

IMAGING PERFORMED BY Normal shape, echogenic appearance, and position of the left gland (0.59). Right gland not visualized.

Dr Stan Gira

Spleen

HOSPITAL NAME

Sabadilla Animal Clinic

Enlarged with a hyperechogenic and nodular appearance. Nodules are parenchymal, hypoechogenic, and of varying sizes. Smooth homogenous parenchyma, regular curvilinear capsule, and normal vasculature.

REFERRING VET

Dr Pytka

Liver

INVOICE

Enlarged with a mottled echogenic and nodular appearance, some loss of portal markings, and regular curvilinear capsule. Nodules are parenchymal, hypoechogenic, and of varying sizes. No masses evident.

304114

Gall bladder

DATE

Full containing normal anechoic bile. Normal thickness and appearance of the wall. Normal bile duct.

4/12/23

PATIENT *Gastrointestinal*

Stoney Avery Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, normal wall thickness and peristaltic activity, and no distension of the lumen.

SPECIES *Pancreas*

Canine Normal size and echogenic appearance. Regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

BREED *Free Abdomen*

Irish Water Spaniel Mesenteric lymphadenomegaly with a rounded shape and hypoechogenic appearance. Large mottled echogenic mass (11 cm) in the mid-abdomen. Moderate amount of ascites present.

SEX MN Hyperechogenic appearance of the mesentery.

Age Normal size of the caudal vena cava, portal vein, and aorta with no obvious turbulent blood flow evident.

9 years

ULTRASONOGRAPHIC FINDINGS
WEIGHT

33 kg

Primary Findings:

- Nodular hepatopathy.
- Nodular splenomegaly.
- Mesenteric lymphadenomegaly.
- Abdominal mass.
- Ascites.
- Mesenteric inflammation.

INTERPRETED BY

Remo Lobetti, BVSc,
MMedVet (Med), PhD, Dipl.
ECVIM

Secondary Findings:

- None.

IMAGING PERFORMED BY

Dr Stan Gira

HOSPITAL NAME

Sabadilla Animal Clinic

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

With the abdominal mass, lymphadenomegaly, and hepatic and splenic changes, the most likely diagnosis would be lymphoma, with granulomatous disease a differential diagnosis.

REFERRING VET

Dr Pytka

Further assessment needs to be based on the pending cytology result but could include FNA cytology of the liver, spleen, and lymph nodes.

INVOICE

Specific therapy would be dependent on an etiological diagnosis.
