

PATIENT PRESENTING CLINICAL SIGNS

Bentley Dougherty History: Anorexia and vomiting. Previous history of diarrhea.

SPECIES Physical Examination: N/A.

Canine Urinalysis: N/A.

Fecal Analysis: Negative.

BREED CBC: N/A.

Cocker Spaniel Mix Serum Biochemistry: Abnormal cPL.

SEX Radiographic Findings: Non-significant changes.

MN

AGE ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

7 years **Urinary System**

Full urinary bladder with a normal thickness and appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

WEIGHT 34.5 # Normal trigone area, proximal urethra, and iliac blood vessels.

Normal iliac lymph nodes. Ureters not visualized.

INTERPRETED BY

Remo Lobetti, BVSc,
MMedVet (Med), PhD, Dipl.
ECVIM

Normal renal size (left 4.9 cm, right 5.1 cm), echogenic appearance, cortico-medullary differentiation, pelvis, and capsule.

Reproductive System

IMAGING PERFORMED BY Small hypoechogenic prostate.

Cathleen Whitcraft, DVM **Adrenal Glands**

HOSPITAL NAME Normal position, echogenic appearance, shape, and size. Left 0.38/0.47 cm, right 0.52/0.32 cm.

Spleen

Craig Road Animal Hospital

REFERRING VET Normal size and echogenic appearance. Smooth homogenous parenchyma, curvilinear capsule, and normal vasculature. No inflammatory, neoplastic, infarction, or infiltrative changes evident.

Cathleen Whitcraft, DVM

Liver

INVOICE Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident.

304162

Gall bladder

DATE

Full containing normal anechoic bile. Normal appearance and thickness of the wall. Normal bile duct.

4/26/23

PATIENT *Gastrointestinal*

Bentley Dougherty Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, normal wall thickness and peristaltic activity, and no distension of the lumen. Gas and fluid within the stomach, small amount of chyle within the duodenum.

SPECIES

Canine

Pancreas

BREED

Enlarged with a hypoechogenic appearance and irregular capsule. Hyperechogenic appearance of the mesentery and fat surrounding the pancreas.

Cocker Spaniel Mix

Free Abdomen

SEX

No mesenteric lymphadenomegaly.
No ascites evident.

ULTRASONOGRAPHIC FINDINGS

7 years

Primary Findings:

- Pancreatitis.

WEIGHT

Secondary Findings:

34.5 #

- None.

INTERPRETED BY

Remo Lobetti, BVSc,
MMedVet (Med), PhD, Dipl.
ECVIM

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The appearance of the pancreas is consistent with pancreatitis.

IMAGING PERFORMED BY

Cathleen Whitcraft, DVM

At this point further assessment is not indicated but with the history of the chronic diarrhea, endoscopy of the upper GI tract with biopsies could be considered.

HOSPITAL NAME

Management of the pancreatitis would be fluid therapy, opioid analgesics, antiemetics, and feeding a low-fat intestinal diet. The use of fuzapladib (Panoquell), which is a novel drug for controlling clinical signs in dog with acute pancreatitis, could also be considered.
