

PATIENT PRESENTING CLINICAL SIGNS

Cabella Gallagher History: Stranguria in March – normal urinalysis; now showing blood and epithelial cells.

SPECIES Physical Examination: N/A.

Canine Urinalysis: Hematuria, epithelial cells on sediment.

CBC: N/A.

BREED Serum Biochemistry: N/A.

Dachshund Radiographic Findings: NA.

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

Full urinary bladder with an irregular and thickened appearance of the dorsal wall with areas of mineralization. Normal anechoic urine with no sediment or uroliths evident.

Normal trigone area, proximal urethra, and iliac blood vessels.

Normal iliac lymph nodes. Ureters not visualized.

Normal renal size (left 4.7 cm, right 5.3 cm), echogenic appearance, cortico-medullary differentiation, blood flow, pelvis, and capsule.

Reproductive System

N/A.

IMAGING PERFORMED BY

Chaley Hunt, LVT

Adrenal Glands

Normal shape, echogenic appearance, size, and position. Left 0.75 cm, right 0.36/0.43cm.

HOSPITAL NAME

Columbia Animal Clinic

Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma, smooth curvi-linear capsule, and normal vasculature. No evidence of inflammatory, neoplastic, infarction, or infiltrative changes noted

REFERRING VET

Dr Michelle Engel

Liver

INVOICE

303061

Normal size, echogenic appearance, and portal markings. No nodules or masses evident. Full gall bladder containing normal anechoic bile. Normal thickness and echogenic appearance of the gall bladder wall. Normal bile duct.

DATE

6/24/22

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, normal wall and peristaltic activity, and no distension of the lumen.

PATIENT *Pancreas*

Cabella Gallagher Normal size and echogenic appearance. Normal echogenic appearance of the mesentery and fat surrounding the pancreas

SPECIES *Free Abdomen*

Canine No mesenteric lymphadenomegaly.
No ascites.

BREED

Dachshund

ULTRASONOGRAPHIC FINDINGS

SEX Primary Findings:

- Urinary bladder thickening.

FS

AGE Secondary Findings:

- None.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Etiologies for the urinary bladder would be bacterial cystitis, sterile cystitis, and emerging neoplasia.

INTERPRETED BY

Remo Lobetti, BVSc,
MMedVet (Med), PhD, Dipl.
ECVIM

Further assessment would urine culture, BRAF assay, and possible catheter-assisted aspirate/biopsy of the bladder wall.

Specific therapy would be dependent on an etiological diagnosis.
