PRESENTING CLINICAL SIGNS
 History: Cystotomy in May.
 Physical Examination: N/A.
 Urinalysis: Bacilli bacteruria.
 CBC: N/A.
 Serum Biochemistry: N/A.
 Radiographic Findings: N/A.

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN
Urinary System

Full urinary bladder with a normal thickness and appearance of the wall. Small amount of floating hyperechogenic sediment. No uroliths evident.

Normal trigone area, proximal urethra (0.1 cm), and iliac blood vessels.

Normal iliac lymph nodes (1.3 cm, 1.9 cm). Ureters not visualized.

Normal renal size (left 4.5 cm, right 4.8 cm) with increased echogenic appearance, some loss of cortico-medullary differentiation, and normal pelvis, and capsule.

Reproductive System

Prostamegaly (1.5 x 3 cm) with a mottled echogenic appearance, regular capsule, and normal appearance of the peri-prostatic tissue. Normal size, shape and echogenic appearance of the testes.

Adrenal Glands

Normal shape, echogenic appearance, position, and size. Left 0.48/0.41, right 0.31/0.46 cm.

Spleen

Normal size (0.9 cm) and echogenic appearance. Smooth homogenous parenchyma, regular curvilinear capsule, and normal vasculature. No evidence of inflammatory, neoplastic, infarction, or infiltrative changes noted.

Liver

Normal size, echogenic appearance, normal portal markings, and regular curvilinear capsule. No nodules or masses evident. Full gall bladder containing normal anechoic bile. Normal thickness and appearance of the gall bladder wall. Normal bile duct (0.1 cm).

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, normal wall thickness (duodenum 0.43 cm, jejunum 0.41 cm) and peristaltic activity, and no distension of the lumen.

**PATIENT*****Pancreas***

Chewy Schlotchauer

Normal size (right 1.2 cm, left 1.5 cm) with a hyperechogenic appearance and an irregular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

SPECIES***Free Abdomen***

Canine

No mesenteric lymphadenomegaly.
No ascites.

BREED

Corgi Mix

ULTRASONOGRAPHIC FINDINGS

Primary Findings:

- Prostategaly.
- Pancreatitis.
- Age-related renal changes vs renal disease.

SEX

Intact Male

Age

6 years

Secondary Findings:

- Urinary bladder sediment.

WEIGHT

20 #

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**INTERPRETED BY**

Remo Lobetti, BVSc,
MMedVet (Med), PhD, Dipl.
ECVIM

Etiologies for the prostate would be benign prostatic hyperplasia and prostatitis, with neoplasia an unlikely differential diagnosis.

Etiologies for the pancreas would be chronic pancreatitis and fibrosis.

Further assessment would be urine culture, fPL/PSL assay, renal function (urine SG, urea, creatinine, SDMA), and either FNA cytology of the prostate or prostatic wash cytology.

Specific therapy would be dependent on an etiological diagnosis. Management of the prostate would be either surgical or chemical castration.
