PRESENTING CLINICAL SIGNS

History: anal gland mass, pre surgical screen.

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

Small urinary bladder with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measures 3.6 cm, right measures 3.1 cm), with increased echogenic appearance, some loss of cortico-medullary differentiation, and normal pelvis and capsule. No infarcts, mineralizations, or renoliths evident.

Reproductive System

Small, hypoechoic prostate measuring 0.6 cm in width.

Adrenal Glands

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal measures 0.56 cm, and 0.63 cm in width. Right adrenal measures 0.52 cm, and 0.56 cm in width.

Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measures 0.8 cm in width. Incidental myelolipoma present.

Liver

Normal size, with an increased echogenic appearance, normal portal markings, and regular curvilinear capsule. Small, focal hyperechogenic parenchymal nodule in the cranial aspect of the right lobe, measuring approximately 0.6 cm x 0.7 cm in size. No additional nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

Gallbladder

Full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no

distension of the lumen. Small amount of fluid present within the stomach. Fecal material present within the colon.

Pancreas

Normal size and echogenic appearance. Regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas. Left pancreas measures 0.5 cm in width. Right pancreas measures 0.8 cm in width.

Free Abdomen

Normal mesenteric lymph nodes measure up to 0.5 cm x 1.1 cm in size.

No ascites evident.

ULTRASONOGRAPHIC FINDINGS

- Hepatopathy.
- Hepatic nodule.
- Age related renal changes versus early chronic kidney disease.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The most likely etiology for the hepatopathy would be age related reactive hyperplasia with vacuolar and metabolic hepatopathies less likely differential diagnoses. The hepatic nodule could be considered an incidental nodular hyperplasia. On this ultrasound, there is no obvious evidence of metastatic disease.
