PRESENTING CLINICAL SIGNS

History: Grade 4/6 heart murmur, no arrhythmias; strong, synchronous femoral pulses HM - r/o CVD vs other * H/O Hemartoma removal RH * H/O MCT low grade removal 2022 LH
Abnormal PE/Chem/CBC/UA Results: RBC 4.00Hematocrit 28.8Hemoglobin 9.8Reticulocytes 20Reticulocytes Hemoglobin 22.3Lymphocytes 0.801Monocytes 0.783 SDMA 27Potassium 5.6Na: K Ration 27Albumin 2.4ALT 13Amylase 1615Specific Gravity 1.022Total T4 0.7 rerunning CBC today with path review - pet mildly lethargic at home

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The urinary bladder is full with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 4.8 cm, right measured 5.0 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident.

Adrenal Glands

The left adrenal gland is normal in shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 0.51 cm and 0.47 cm in width. The right adrenal gland was not visualized.

Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 0.3 cm in width.

Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

Gallbladder

The gallbladder is full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

Pancreas

The pancreas is poorly visualized, yet the visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

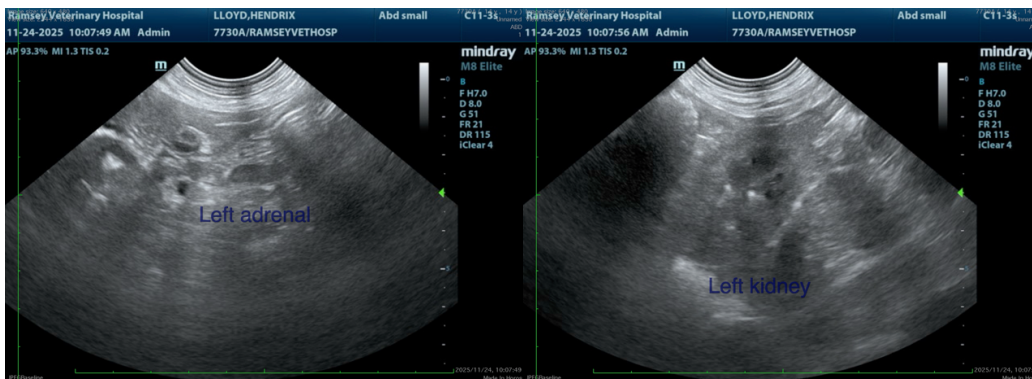

ULTRASONOGRAPHIC FINDINGS

- Normal ultrasound examination.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

On this ultrasound there is no obvious etiology for the anemia.

Further assessment and therapy needs to be based on the pending CBC results, but could include three view thoracic radiographs and echocardiography.
