PRESENTING CLINICAL SIGNS

History: Mammary gland sensitive to touch, blood coming from vagina - constant licking. Owner wants to check Missy because other pet passed away on Saturday - Splenic tumor that ruptured. PTS.

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**Urinary System**

Full urinary bladder with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident. Normal appearance of the trigone area, proximal urethra (0.2 cm), and iliac blood vessels. Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Visible uterine stump was evident, measuring 0.6 cm x 4.3 cm in size, containing no fluid, and with a normal appearance of the tissue surrounding the stump.

Normal renal size, architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. The left kidney measured 6.6 cm. The right kidney measured 5.8 cm. Normal color flow pattern was evident in both kidneys.

Adrenal Glands

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. The left adrenal gland measured 2.85 cm in length x 0.56 cm and 0.43 cm in width. The right adrenal gland measured 3.46 cm in length x 0.54 cm and 0.47 cm in width.

Spleen

Normal size (1.9 cm in width) and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident.

Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

Gallbladder

Full gallbladder, containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine (up to 0.4 cm), ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

The pancreas was not clearly visualized, but visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

ULTRASONOGRAPHIC FINDINGS

- Normal ultrasound examination of the abdomen

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

On this ultrasound, there is no obvious etiology for the presenting clinical signs. With the presenting clinical signs, ovarian remnant syndrome should be considered.

Further assessment would be vaginal cytology and anti-müllerian hormone assay.

Specific therapy would be dependent on an etiological diagnosis.
