PRESENTING CLINICAL SIGNS

Thrombocytopenia. Presented febrile 11/26 PLT =54k; 11/28 =23k; 11/29= 26k; 12/1 =102k, 4dx neg, mild ALP elevation. Current Medications: Pred 40mg bid, Omeprazole 40mg bid; Sucralfate 1g q8h; Clavamox 500mg bid

Abnormal PE/Chem/CBC/UA Results: PLT 102k; AIP 443 (11/26 PLT =54k; 11/28 =23k; 11/29= 26k; 12/1 =102k)

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

Full urinary bladder with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size, architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Left kidney measured 6.9 cm. Right kidney measures 7.0 cm. Normal color flow pattern evident in both kidneys.

Adrenal Glands

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left measures 1.97 cm in length x 0.53 cm and 0.43 cm in width. Right measures 2.67 cm in length x 0.90 cm in width.

Spleen

Normal size (2.0 cm in width) and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident.

Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

Gallbladder

Full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

Pancreas

Visible sections present normal size and echogenic appearance. Regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

ULTRASONOGRAPHIC FINDINGS

- Normal ultrasound examination of the abdomen.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

On this ultrasound there is no obvious etiology for the thrombocytopenia. The most likely diagnosis would be primary immune mediated thrombocytopenia.

Management would be to continue with the current therapy.
