PRESENTING CLINICAL SIGNS

- Presenting for PU/PD past month. Otherwise doing well.
- Few masses trunk. otherwise normal exam BUN24mg/dL, crea 1.6 mg/dL USG 1.013, pH 5, UPC 0.2 Lepto Blood urine PCR- Negative Urine culture Negative.

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The urinary bladder is full with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 6.5 cm, right measured 6.6 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident.

The prostate is small and hypoechogenic measuring 1.5 cm in width.

Adrenal Glands

The left adrenal gland is normal in shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 3.53 cm in length x 0.75 cm and 0.85 cm in width. The right adrenal gland was enlarged with a hypoechogenic appearance, but maintained normal shape, position and appearance of the visible peri-adrenal vasculature. The right adrenal gland measured 2.84 cm in length x 0.95 cm and 1.13 cm in width.

Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 2.4 cm in width.

Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

Gallbladder

The gallbladder is full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

Pancreas

Normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

ULTRASONOGRAPHIC FINDINGS

- Right adrenomegaly.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Although the right adrenomegaly may merely be an incidental finding, with the PU/PD emerging pituitary dependent Cushing's disease needs to be considered.

Further assessment would be urine cortisol to creatinine ratio and if abnormal, then adrenal function testing (ACTH stimulation/LDDST) would then be indicated.

Specific therapy would be dependent on an etiological diagnosis.
