

## PATIENT

Julia Lieberman

## SPECIES

Feline

## BREED

DLH

## SEX

Spayed Female

## AGE

15 Years 8 Months

## WEIGHT

11.6 pounds

## INTERPRETED BY

Remo Lobetti, BVSc,  
MMedVet (Med), PhD,  
Dipl. ECVIM (Internal  
Medicine)

## IMAGING PERFORMED BY

Dr. Melinda Persson

## HOSPITAL NAME

At Home Veterinary

## REFERRING VET

Dr. Melinda Persson

## INVOICE

14262

## DATE

03/11/26

## PRESENTING CLINICAL SIGNS

- Seen on emergency recently for vomiting and inappetence - POCUS revealed pancreatic pathology - mass vs pancreatitis
- Feeling better and no longer on supportive treatments

Abnormal PE/Chem/CBC/UA Results: • PLI 31.5 (0.1-35) • TLI 96.2 (12-82)

## ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

### Urinary System

Full urinary bladder with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size, architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. The left kidney measured 3.6 cm in length. The right kidney measured 3.9 cm in length. Normal color flow pattern was evident in both kidneys.

### Adrenal Glands

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. The left adrenal gland measured 0.35 cm in width. The right adrenal gland measured 0.35 cm in width.

### Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 0.80 cm in width.

### Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

### Gallbladder

Full gallbladder containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

### Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

**Pancreas**

Visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

**Free Abdomen**

Normal mesenteric lymph nodes.

No ascites evident.

Large irregular lobulated hyperechogenic poorly vascularized mass in the region of the pancreas measuring approximately 1.8 cm x 3.0 cm in size.

**ULTRASONOGRAPHIC FINDINGS**

- Abdominal mass.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The most likely etiology for the abdominal mass would be neoplasia with granuloma a less likely differential diagnosis.

Further assessment would be three view thoracic radiographs and FNA cytology of the mass.

Specific therapy will be dependent on an etiological diagnosis.
