

**PATIENT**

Captain Hunt

**SPECIES**

Canine

**BREED**

Labrador Retriever x

**SEX**

Neutered Male

**AGE**

13 Years

**WEIGHT**

52 lbs

**INTERPRETED BY**

Remo Lobetti, BVSc,  
 MMedVet (Med),  
 PhD, Dipl. ECVIM

**IMAGING PERFORMED BY**

Ginny Dodd

**HOSPITAL NAME**

Steele Creek Animal  
 Hospital

**REFERRING VET**

Dr. Daniels

**INVOICE**

73849

**DATE**

3/20/26

**PRESENTING CLINICAL SIGNS**

Hyporexia.

Abnormal PE/Chem/CBC/UA Results: PE- multiple soft raised, freely movable masses ~ 2 cm round on L flank, L thorax, and sternal abd area; not on any medications; eating chicken with dog food to ^ food consumption CBC: PLT 483 ^ CHEM: triglycerides low normal 86, Phosphorus 1.9 > (2.5- 6) UA: 1.029, pH 9.0, prot +2 high +2 hemolysis- NS interference T4- < 0.5 LOW

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

Small urinary bladder with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size, architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Left kidney measured 6.0 cm. Right kidney measured 5.4 cm. Normal color flow pattern evident in both kidneys.

**Reproductive System**

Small, hypoechogenic prostate measuring 1.1 cm in width.

**Adrenal Glands**

Normal size, with dorsal flattened shape, normal echogenic appearance, position, and appearance of the visible peri-adrenal vasculature. Left measured 1.99 cm in length x 0.41 cm and 0.34 cm in width. Right measured 1.89 cm in length x 0.41 cm and 0.46 cm in width.

**Spleen**

Normal size (1.4 cm in width) and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident.

**Liver**

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

**Gallbladder**

Small containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

**PATIENT**

Captain Hunt

**Gastrointestinal**

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

**Pancreas**

Visible section presents normal size and echogenic appearance. Regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

**Free Abdomen**

Normal mesenteric lymph nodes.

No ascites evident.

**ULTRASONOGRAPHIC FINDINGS**

- Small adrenal glands(?)

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Although the appearance of the adrenal glands may merely be an incidental finding, with presenting clinical signs, typical or atypical Addison's disease needs to be considered.

Further assessment would be electrolytes (if not already done), basal cortisol assay, and possibly an ACTH stimulation test.

Specific therapy would be dependent on an etiological diagnosis.
