

## PATIENT

Bo Cole

## SPECIES

Canine

## BREED

Golden Retriever  
Poodle

## SEX

Neutered male

## AGE

6 years

## WEIGHT

42 lbs

## INTERPRETED BY

Remo Lobetti, BVSc,  
MMedVet (Med),  
PhD, Dipl. ECVIM

## IMAGING PERFORMED BY

Dr. Jeremiah Gabriel

## HOSPITAL NAME

Central Jersey AH

## REFERRING VET

Dr. Gabriel

## INVOICE

73738

## DATE

3/25/26

## PRESENTING CLINICAL SIGNS

- Vomiting with blood. Bloody stool

## ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

### *Urinary System*

The urinary bladder is small with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 4.3 cm, right measured 4.6 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Normal color flow pattern is evident in both kidneys.

The prostate is not visualized.

### *Adrenal Glands*

The left adrenal gland was small in size, but maintained a normal shape, echogenic appearance, position and appearance of the visible peri-adrenal vasculature. The left adrenal gland measured 0.34 cm in width.

The right adrenal gland was not visualized.

### *Spleen*

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 2.1 cm in width.

### *Liver*

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

### *Gallbladder*

The gallbladder is full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

**PATIENT**

Bo Cole

**SPECIES**

Canine

**BREED**

Golden Retriever  
Poodle

**SEX**

Neutered male

**AGE**

**Gastrointestinal**

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

**Pancreas**

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

**Free Abdomen**

Normal mesenteric lymph nodes.

No ascites evident.

**ULTRASONOGRAPHIC FINDINGS**

- Small adrenal gland.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

With the presenting clinical signs and the small left adrenal gland, Addison's disease needs to be considered.

Further assessment would be based on the pending results, but could include basal cortisol and/or ACTH stimulation test.

Specific therapy would be dependent on an etiological diagnosis.

Initial management would be fluid therapy as needed, correction of any electrolyte anomalies, antiemetics, intestinal absorbents/protectants and feeding small frequent meals of an intestinal type diet.
