## PRESENTING CLINICAL SIGNS

- Unable to hold his bladder, and having a weak stream, doesn't seem like pt can fully empty bladder.
- Excessive Thirst. Patient has been treated once with SMZ tabs and once with enrofloxacin, symptoms never full resolve
- UA results from December 2025: Rods - present with symptoms of prostatitis. Urine is dilute. Suspect primary prostate issue. Patient is Hypothyroid

## ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

### *Urinary System*

The urinary bladder is full with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 7.2 cm, right measured 9.3 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident.

The prostate is enlarged for a neutered male and measured 1.6 x 1.7 cm in size with a hypoechogenic appearance and a slightly, irregular capsule.

### *Adrenal Glands*

The left adrenal gland is normal in shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 0.69 cm and 0.75 cm in width. The right adrenal gland was not visualized.

### *Spleen*

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 2.7 cm in width.

### *Liver*

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

## Gallbladder

The gallbladder is full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

## Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

## Pancreas

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

## Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

## ULTRASONOGRAPHIC FINDINGS

- Prostatomegaly.

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Etiologies to consider for the prostatomegaly would be emerging neoplasia and prostatitis.

Further assessment would be prostatic wash for cytology and culture.

Specific therapy would be dependent on an etiological diagnosis.
