PRESENTING CLINICAL SIGNS

- **Patient has been fast over 12 hours
- Present for exam March 21 for 1 week of vomiting large amounts of food ~7 hours after eating. Still BAR and interested in food. Seemed to respond to Cerenia and Omeprazole
- Presented March 31 for same symptoms (came back on March 29)
- Owner mentioned that pet ate part of a bed a few days prior to any of these symptoms
- CBC: -all values within normal limits -high normal Hct Chemistry: -mild hyperglycemia

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The urinary bladder is full with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 5.9 cm, right measured 5.8 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Normal color flow pattern is noted in both kidneys.

Small, hypoechogenic prostate measured 1.0 cm in width.

Adrenal Glands

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 0.44 cm and 0.41 cm in width. The right adrenal gland measured 0.43 cm in width.

Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 2.2 cm in width.

Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

Gallbladder

The gallbladder is full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen. A large amount of ingesta is present within the stomach. A small amount of chyme is present in the proximal duodenum. There is an empty appearance of the rest of the small intestine.

Pancreas

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

ULTRASONOGRAPHIC FINDINGS

- Ingesta filled stomach.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The patient's history, presenting clinical signs and ingesta filled stomach after a 12 hour fast is indicative of a gastric foreign body.

Further assessment would be laparotomy.
