

## PATIENT

Lola Owens

## SPECIES

Canine

## BREED

Mix

## SEX

Spayed female

## AGE

6 years

## WEIGHT

39.8 lbs

## INTERPRETED BY

Remo Lobetti, BVSc,  
MMedVet (Med),  
PhD, Dipl. ECVIM

## IMAGING PERFORMED BY

Dr. Kendall Helbert

## HOSPITAL NAME

South College VC

## REFERRING VET

Dr. Albert

## INVOICE

74217

## DATE

4/6/26

## PRESENTING CLINICAL SIGNS

- Seizure on 3/5/26. PE unremarkable at time of presentation. Seizure on 3/26/26. PE unremarkable on exam 3/27/26. Recheck exam on 4/6/26 unremarkable.
- No prior history of seizures or other abnormal neurologic events
- Bloodwork attached. 3/5/26: elevated ALT, GGT and Total Bilirubin 3/27/26: negative 4Dx snap test 4/6/26: elevated amylase and lipase. Abnormal cPL snap test.

## ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

### *Urinary System*

The urinary bladder is full with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 5.8 cm, right measured 6.4 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Normal color flow pattern is evident in both kidneys.

### *Adrenal Glands*

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 2.27 cm in length x 0.44 cm and 0.8 cm in width. The right adrenal gland measured 3.57 cm in length x 0.46 cm and 0.57 cm in width.

### *Spleen*

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 1.6 cm in width.

### *Liver*

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

## Gallbladder

The gallbladder is full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

## Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

## Pancreas

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

## Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

## ULTRASONOGRAPHIC FINDINGS

- Normal ultrasound examination of the abdomen.

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Although the visible section of the pancreas appears ultrasonographically normal, with the elevated amylase and lipase activity and abnormal CPL snap test, pancreatitis is still possible and should be followed up with CPL/PSL assay.

Specific therapy would be dependent on an etiological diagnosis.
