PRESENTING CLINICAL SIGNS

History: 1-2week anorexia
labwork NR

AXR - bunched small intestine
no help with appetite stimulant or pred

Abnormal PE/Chem/CBC/UA Results: tachypnea after ultrasound cbc/chem/lytes/PLI NR no urine
or T4 done CXR after ultrasound showed bilateral pleural effusion proBNP after ultrasound showed
abnormal echo pending

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The urinary bladder is full with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 3.7 cm, right measured 3.4 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident.

Adrenal Glands

The left adrenal gland is normal in shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 1.3 cm in length x 0.46 cm in width. The right adrenal gland was not visualized.

Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 0.5 cm in width.

Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

Gallbladder

The gallbladder is full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

Pancreas

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas. The left pancreas measures 0.6 cm in width.

Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

Thorax

A moderate amount of acellular pleural effusion was present. Dilated appearance of the left and right ventricle.

ULTRASONOGRAPHIC FINDINGS

- Normal ultrasound examination of the abdomen.
- Pleural effusion, suspected dilated cardiomyopathy.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Further assessment and therapy needs to be based on the pending echocardiogram.

Initial management that would be recommended would be thoracocentesis.
