ULTRASONOGRAPHIC FINDINGS

- Pancreatic mass

AGE

6yr

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The most likely etiology for the pancreatic mass would be insulinoma. If surgery has been contemplated for the mass, then a CT scan would be recommended. Symptomatic management of an insulinoma would be feeding small frequent meals of a high carbohydrate diet and prednisolone. Consultation with an oncologist would be recommended for further specific chemotherapy options for an insulinoma.
