

**PATIENT**

Bear Vaddiraj

**SPECIES**

Canine

**BREED**

Cattle Dog Cross

**SEX**

Neutered male

**AGE**

14 years

**WEIGHT**

33.5 kg

**INTERPRETED BY**

Remo Lobetti, BVSc,  
 MMedVet (Med),  
 PhD, Dipl. ECVIM

**IMAGING PERFORMED BY**

Crystal Hill

**HOSPITAL NAME**

Headon Forest AH

**REFERRING VET**

Dr. Guagliano

**INVOICE**

78383

**DATE**

6/4/26

**PRESENTING CLINICAL SIGNS**

History: Diagnosed with hyperadrenocorticism, US to assess adrenal glands and any other concerns prior to starting Vetoryl. Hypothyroidism. On Thyroid meds.  
 CBC WNI, Chem marked elevation in ALP 1263(5-160) rest WNL , 4dx negative

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The urinary bladder is small with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 6.6 cm, right measured 6.6 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident.

The prostate is small and hypoechogenic.

**Adrenal Glands**

The adrenal glands are bilaterally enlarged, but maintained a normal shape, echogenic appearance, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 3.01 cm in length x 0.83 cm and 0.93 cm in width. The right adrenal gland measured 2.72 cm in length x 0.83 cm in width.

**Spleen**

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 1.7 cm in width.

**Liver**

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

**DATE**

6/4/26

***Gallbladder***

The gallbladder is full almost distended containing a moderate amount of both adhered and non-adhered, hyperechogenic sediment with the adhered sediment arranged in a stellate pattern. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

***Gastrointestinal***

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

***Pancreas***

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

***Free Abdomen***

Normal mesenteric lymph nodes.

No ascites evident.

**ULTRASONOGRAPHIC FINDINGS**

- Bilateral adrenomegaly.
- Mucocele.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The adrenal glands would be consistent with a diagnosis of pituitary dependent Cushing's disease.

Management of the mucocele would either be cholecystectomy or Ursodiol with regular ultrasound monitoring.
