

**PATIENT**

Boca Senzig Wescott

**SPECIES**

Feline

**BREED**

Domestic Shorthair

**SEX**

Spayed female

**AGE**

9 years

**WEIGHT**

9.34 lbs

**INTERPRETED BY**

Remo Lobetti, BVSc,  
MMedVet (Med),  
PhD, Dipl. ECVIM

**IMAGING PERFORMED BY**

Dr. Ken Leal

**HOSPITAL NAME**

VCA Blairstown AH

**REFERRING VET**

Blairstown AH

**INVOICE**

69786

**DATE**

1/5/26

**PRESENTING CLINICAL SIGNS**

History: Icteric not eating vomiting Depressed Medications: cerenia given 12/31/25  
ALT = 233 AlkPhos = 546 GGT = 6 Bilirubin = 12.6 WBC = 2,430

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The urinary bladder is full with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 3.2 cm, right measured 3.8 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Normal color flow pattern is evident in both kidneys.

**Adrenal Glands**

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 0.27 cm in width. The right adrenal gland measured 0.33 cm in width.

**Spleen**

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 0.5 cm in width.

**Liver**

Normal size with a diffuse increased echogenic appearance, normal portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

**Gallbladder**

The gallbladder is full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

**Gastrointestinal**

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

**Pancreas**

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

**Free Abdomen**

Normal mesenteric lymph nodes.

A small amount of acellular ascites present around the liver lobes.

**ULTRASONOGRAPHIC FINDINGS**

- Hepatopathy.
- Ascites.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Etiologies for the hepatopathy would be acute hepatitis, granulomatous disease, lipidosis and possibly infiltrative neoplasia.

The ascites can be ascribed as secondary to the hepatopathy.

Further assessment would be FNA cytology of the liver; however, a tru cut or wedge biopsy may be required for a final etiological diagnosis.

Initial management would be fluid therapy as needed, correction of any electrolyte anomalies, nutritional support (tube feeding if needed), antiemetics and Ursodiol.
