PRESENTING CLINICAL SIGNS

History: On/off chronic UTIs, increased urinating so checking kidneys, bladder, and adrenals Current meds: Proin

Abnormal PE/Chem/CBC/UA Results: Chem: ALKP 424 T4: 0.9 low normal Accuplex borderline HW positive, microfilaria negative Slight glycosuria BG WNL USG 1.023

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The urinary bladder is full with a thickened and irregular appearance of the apical wall (up to 0.7 cm) with the rest of the wall having a normal thickness and smooth appearance. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 6.7 cm, right measured 6.7 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Both kidneys have a normal color flow pattern.

Adrenal Glands

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 3.61 cm in length x 0.87 cm in width. The right adrenal gland measured 2.52 cm in length x 0.99 cm in width.

Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 3.0 cm in width.

Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

Gallbladder

The gallbladder is small containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

Pancreas

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

ULTRASONOGRAPHIC FINDINGS

- Urinary bladder pathology.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Etiologies for the urinary bladder pathology would be chronic bacterial cystitis, granulomatous disease and emerging neoplasia. Further assessment would be urine culture, BRAF analysis and/or a catheter assisted aspirate/biopsy for cytology/histopathology and culture.

Specific therapy would be dependent on an etiological diagnosis.
