## PRESENTING CLINICAL SIGNS

History: BCS 6/9. Following routine COHAT has lost ~1.5 lbs since 10/29. Anorexia. On PE new heart murmur, otherwise NSF. Medications: Tried pain trial; Abx trial; Cerenia trial; Mirataz with no success. (Gabapentin for scan)  
BUN 43; Crea 2.1; dehydrated 11/25 @ ER. UA not performed.

## ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

### *Urinary System*

The urinary bladder is small with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

The kidneys are bilaterally enlarged (left measured 6.1 cm, right measured 6.4 cm), with an irregular shape, increased echogenic appearance, some loss of cortico-medullary differentiation, mild pyelectasia and an irregular capsule. No infarcts, mineralization or renoliths evident. A small amount of perinephric fluid was present. Poor color flow pattern is evident in both kidneys.

### *Adrenal Glands*

The left adrenal gland is normal in shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 0.46 cm in width. The right adrenal gland was not clearly visualized, but appears to be of normal shape, echogenic appearance and size.

### *Spleen*

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 0.7 cm in width.

### *Liver*

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

## Gallbladder

The gallbladder is small containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

## Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

## Pancreas

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

## Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

## ULTRASONOGRAPHIC FINDINGS

- Renal disease.

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

Etiologies for the renal disease would be lymphoma, granulomatous disease and bacterial nephritis.

Further assessment would be urinalysis, urine culture and FNA cytology of both kidneys.

Specific therapy would be dependent on an etiological diagnosis.
