**DATE**

11/7/25

**PRESENTING CLINICAL SIGNS**

History: Elev. ALT and Calc. Lameness.  
Abnormal PE/Chem/CBC/UA Results: ALT-137 Calc-12.8 BUn to creat ratio. normal.

**ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN**

**Urinary System**

The urinary bladder is full with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 4.4 cm, right measured 4.5 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Normal color flow pattern is evident in both kidneys.

Small, hypoechogenic prostate is noted.

**Adrenal Glands**

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 2.46 cm in length x 0.54 cm and 0.63 cm in width. The right adrenal gland measured 1.88 cm in length x 0.69 cm and 0.64 cm in width.

**Spleen**

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 1.0 cm in width.

**Liver**

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

**Gallbladder**

The gallbladder is small containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

**Gastrointestinal**

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen. A small amount of ingesta is present within the stomach compatible with a recent meal.

**Pancreas**

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

**Free Abdomen**

Normal mesenteric lymph nodes.  
No ascites evident.

**ULTRASONOGRAPHIC FINDINGS**

- Normal ultrasound examination of the abdomen.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

On this ultrasound there is no obvious etiology for the mildly elevated ALT activity or the hypercalcemia.

Further assessment would be ionized calcium and if elevated then a PTH and PTHrP assay would be recommended. FNA cytology of the liver can also be considered.

Specific therapy would be dependent on an etiological diagnosis.
