

## PATIENT

Finley McCarthy

## SPECIES

Canine

## BREED

Mix

## SEX

Spayed female

## AGE

12 years

## WEIGHT

49 lbs

## INTERPRETED BY

Remo Lobetti, BVSc,  
MMedVet (Med),  
PhD, Dipl. ECVIM

## IMAGING PERFORMED BY

Meghan Morse, LVT,  
CVT

## HOSPITAL NAME

Otterkill AH

## REFERRING VET

Dr. Sahni

## INVOICE

72290

## DATE

3/6/26

## PRESENTING CLINICAL SIGNS

- Met check
- Large fast growing mass- L scapula extending toward axillary- cytology suspicious of sarcoma
- Current meds: Carprofen 50mg BID, Trazodone 100mg PRN

## ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

### *Urinary System*

The urinary bladder is small with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 4.7 cm, right measured 6.0 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Focal, well circumscribed hypoechoic, cortical nodule was noted and measured 1.0 cm in size on the caudal pole of the kidney. Normal color flow pattern is evident in both kidneys.

### *Adrenal Glands*

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 2.96 cm in length x 0.87 cm and 0.79 cm in width. The right adrenal gland measured 2.82 cm in length x 0.79 cm and 0.93 cm in width.

### *Spleen*

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 1.9 cm in width.

### *Liver*

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

**PATIENT**

Finley McCarthy

**SPECIES**

Canine

**BREED**

Mix

**SEX**

Spayed female

**AGE**

12 years

**WEIGHT**

49 lbs

**DATE**

3/6/26

**Gallbladder**

The gallbladder is full containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

**Gastrointestinal**

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen.

**Pancreas**

The visible sections of the pancreas are of normal size and echogenic appearance with a regular capsule. Normal echogenic appearance of the mesentery and fat surrounding the pancreas.

**Free Abdomen**

Normal mesenteric lymph nodes.

No ascites evident.

**ULTRASONOGRAPHIC FINDINGS**

- Focal right sided renal nodule.

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Although the renal nodule may be an incidental finding with the patient's history a metastatic nodule should still be considered.

Further assessment would be FNA cytology of the nodule.
