PRESENTING CLINICAL SIGNS

History: Pancreatitis, liver enzymes, high, infection. Enrofloxacin 22.7 SID for 14 days, gabapentin 50 mg TID for 10 days.

Abnormal PE/Chem/CBC/UA Results: Retic hemo 30.3, WBC 207.07, neut 23.59, mono 2.02, MPV 13.9, platelets 0.49, Gluc 164, glob 4.6, Alt 219, Alp 978, GGT 33, amylase 2,022, lipase 1926

ULTRASONOGRAPHIC EXAMINATION OF THE ABDOMEN

Urinary System

The urinary bladder is full with a normal thickness and smooth appearance of the wall. Normal anechoic urine with no sediment or uroliths evident.

Normal appearance of the trigone area, proximal urethra, and iliac blood vessels.

Normal appearance and size of the iliac lymph nodes. Ureters not visualized, which can be considered a normal finding.

Normal renal size (left measured 4.5 cm, right measured 5.9 cm), architecture, echogenic appearance, cortico-medullary differentiation, which maintains a 1:3 cortex to medulla ratio, pelvis, and capsule. No infarcts, mineralization or renoliths evident. Normal color flow pattern is evident in both kidneys.

The prostate is small and hypoechogenic measuring 0.7 cm in width.

Adrenal Glands

Normal shape, echogenic appearance, size, position, and appearance of the visible peri-adrenal vasculature. Left adrenal gland measured 1.85 cm in length x 0.56 cm and 0.52 cm in width. The right adrenal gland measured 1.88 cm in length x 0.52 cm in width.

Spleen

Normal size and echogenic appearance. Smooth homogenous parenchyma and regular curvilinear capsule. Normal volume of the splenic vasculature without any overt congestion or thrombosis evident. No inflammatory, neoplastic, infarction, or infiltrative changes evident. The spleen measured 1.0 cm in width.

Liver

Normal size, echogenic appearance, portal markings, and regular curvilinear capsule. No nodules or masses evident. Normal appearance of the hepatic and portal vasculature.

Gallbladder

The gallbladder is small containing normal anechoic bile. Normal thickness and echogenic appearance of the wall. Normal size and appearance of the cystic and common bile duct.

Gastrointestinal

Normal appearance of the stomach, duodenum, small intestine, ileo-cecal junction, and colon with no loss of layering, 1:3 muscularis to mucosa ratio, normal wall thickness and peristaltic activity, and no distension of the lumen. A small amount of fluid is present in the proximal duodenum.

Pancreas

Normal size (left lobe measured 0.5 cm in width), both lobes and body of the pancreas have a hypoechoic appearance and an irregular capsule. Hyperechoic appearance of the mesentery and fat surrounding the pancreas.

Free Abdomen

Normal mesenteric lymph nodes.

No ascites evident.

ULTRASONOGRAPHIC FINDINGS

- Pancreatitis.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The appearance of the pancreas would be consistent with acute pancreatitis.

Further assessment that can be considered would be CPL/PSL assay.

Management of the pancreatitis would be fluid therapy, correction of any electrolyte anomalies, opioid analgesics, antiemetics, and feeding small frequent meals of a low-fat intestinal diet. The use of fuzapladib (Panoquell) could also be considered.
