

PATIENT	PRESENTING CLINICAL SIGNS
Teddy Blenkinship	Intermittent gastrointestinal issues, faecal sample neg for panel, CT abdo and thorax pre and post contrast, full blood sample and urine sent off for analysis, awaiting reults. Abnormal PE/Chem/CBC/UA Results: NAD
SPECIES	COMPUTED TOMOGRAPHIC STUDY OF THE THORAX & ABDOMEN
Canine	Pre/post contrast studies provided for review.
BREED	COMPUTED TOMOGRAPHIC FINDINGS
Cross GSD	Chest: The lungs are regularly ventilated with close contact to the inner thoracic wall on all sides. There is no evidence of pleural thickening, fluid accumulation or free pleural gas. Pulmonary density is within normal limits, there is no evidence of focal or nodular pulmonary lesions. The mediastinum is regular in width and density. Mediastinal (sternal, tracheal-, bronchial) lymph nodes are considered to be normal. The thoracic trachea and esophagus present as expected. The heart is inconspicuous as far as can be assessed with CT. The diaphragm appears normal.
SEX	Abdomen:
Male Neutered	The liver shows normal findings in terms of size, surface, shape and contrast behavior. The gallbladder is inconspicuous without evidence of cholestasis. The common bile duct is considered to be normal. The pancreas presents normal size and shape with a smooth surface. The peripancreatic fat tissue and omentum are inconspicuous. The spleen shows normal findings in terms of size, surface, shape and contrast behavior. Unremarkable presentation of the bilaterally symmetrical kidneys. Adrenal glands are in normal limits.
AGE	As far as can be assessed, the stomach and all parts of intestine are regularly presented without any indication of a wall thickening or a mass. There are no signs of an obstructive or functional ileus.
4 Years	Ureters, urinary bladder, trigonum and urethra are presented as expected. There is no evidence of cystic calculi.

PATIENT

Teddy Blenkinship

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Normal findings of the thorax and the abdomen

SPECIES

Canine

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT findings show a regular thorax and abdomen. Normal CT appearance of the stomach, small intestine, liver and pancreas does not exclude gastric/intestinal inflammatory issues such as IBD and functional problems/indigestibility.

BREED

Cross GSD

SEX

Male Neutered

AGE

4 Years
