

## PATIENT

Vincenzo Scuderi

## SPECIES

Canine

## BREED

Labrador Retriever

## SEX

Male Neutered

## AGE

7Y, 8M

## WEIGHT

102lbs

## INTERPRETED BY

Sebastian Jawinski,  
German Board  
Certified Vet Specialist  
in Diagnostic Imaging

## IMAGING PERFORMED BY

Dr. Abina Glennon

## HOSPITAL NAME

New Bridge Veterinary  
Practice

## REFERRING VET

Dr. Abina Glennon

## INVOICE

74689

## DATE

4-21-26

## PRESENTING CLINICAL SIGNS

Panting heavily at night.

Rapid weight gain

Abnormal PE/Chem/CBC/UA Results: Pending bloods. Checking thyroid

## RADIOGRAPH OF THE THORAX

Right lateral view of the thorax provided for review.

## RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits. The extra-thoracic soft tissues are homogenous without abnormalities.

The cardiac silhouette appears normal. The vertebral heart score equals 10.1. The pulmonary vessels are normal in size and taper appropriately in the periphery. There are no signs of relevant nodular focal or diffuse pulmonary changes recognized.

Trachea is unremarkable in diameter and course. The luminal outline of the trachea is smooth. The carina and the bronchial tree appear normal.

The mediastinum presents expected soft tissue density, there is no evidence of tracheobronchial, cranial mediastinal or sternal lymphadenopathy.

The esophagus is not visible and considered to be normal.

The diaphragm is unremarkable; there are no signs of pleural effusion.

## RADIOGRAPHIC DIAGNOSIS

- Normal radiographic findings thorax

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The right lateral projection of the thorax presents normal findings without evidence of a relevant inflammatory process and/or even neoplasia. This does not exclude inflammatory changes within the airways. Depending on the clinical presentation (unspecific, pain?) complementary endoscopic evaluation and sampling could be performed next.
