

**PATIENT PRESENTING CLINICAL SIGNS**

Sasha Flannery P presented with R hind lameness. P was running around in the yard with younger dog. O is unsure of trauma that may have occurred. Grade 3/4 on original presentation. P is doing significantly better today after starting carprofen.

**SPECIES**

CA

**RADIOGRAPHIC FINDINGS**

**Pelvis**

**BREED**

Australian Shepherd

The bony structures of the pelvis and the sacroiliac joints are unremarkable. There is no evidence of a lytic process noted. Coxofemoral joints are inconspicuous. There is no relevant formation of osteophytes recognized. Femoral head/neck formations are unremarkable with a congruent joint space. There are no signs of a lytic or sclerotic process. There is no evidence of a fracture or subluxation.

**SEX**

FS

**RADIOGRAPHIC DIAGNOSIS**

- Normal, age-appropriate findings of the pelvis/coxofemoral joints

**AGE**

11

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

Lesions of muscles/tendons or inflammatory changes of the soft tissues cannot be fully excluded as well as lateral compressive lesions of the spinal cord. A bony lesion is not detected.
