

**PATIENT PRESENTING CLINICAL SIGNS**

Aslan Dioca \*DVM pet. Dysphagia

**SPECIES FLUOROSCOPY SWALLOWING STUDY**

Canine

The swallowing study shows the contrast bole/food passing the thoracic inlet, the heart base and cardia.

There is mild bulging of the heart base with subtle deviation of the esophagus noted which is considered as normal. Sufficient esophageal peristalsis with normal entrance into the stomach is recognized.

**BREED**

Samoyed

Filling of the stomach and the outline of the gastric wall appear regular as far as can be assessed.

**FLUOROSCOPIC DIAGNOSIS****SEX**

- Normal esophagogram

Neutered Male

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS****AGE**

11 Years

Findings of the fluoroscopy appear regular. Esophageal dysfunction is not suspected. Abdominal ultrasound/endoscopy and/or tomography could be the next diagnostic steps.
