

**PATIENT**

Memphis LaChance

PRESENTING CLINICAL SIGNS

Persistent skipping gait of the RHL. Concern that may be possible sciatic neuritis akin to piriformis syndrome in people.

SPECIES

Canine

ULTRASONOGRAPHIC FINDINGS**Sciatic Nerves****BREED**

Belgian Malinois

Both sciatic nerves show a bilaterally regular course, diameter, and an inconspicuous tapering.

The peripheral fascia and musculature are inconspicuous presenting normal echotexture without signs of inflammation, fibrosis, or abscess formation. Fluid filled areas are not recognized.

SEX

M

ULTRASONOGRAPHIC DIAGNOSIS

- Normal findings of the sciatic nerves and the surrounding tissue

AGE

4 Years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

An abnormal focal or long-stretched thickening of the sciatic nerve especially on the right is not recognized. A lesion of the proximal section/sacral plexus is potentially possible. The displayed areas show no evidence of an inflammatory or even neoplastic process.

Diagnostic Imaging

TECHNICAL COMMENTS

Well performed study! Please check if harmonics on/off and reduction of the dynamic range improves images quality!
