PRESENTING CLINICAL SIGNS

Presented for routine annual physical examination and owner had recently noticed the left side seemed to be bulging over the ribs dorsolaterally at the thoracoabdominal junction. No gross abnormalities were noted on the PE, but the patient did seem to have some subtle asymmetrical bulging in the area in question when viewed from caudal to cranial along the median sagittal plane. However, no distinctly palpable abnormalities were found.

Abnormal PE/Chem/CBC/UA Results: Pending.

RADIOGRAPHIC STUDY OF THE ABDOMEN

A radiographic study of the abdomen is provided for review.

RADIOGRAPHIC FINDINGS

The vertebral endplates of the lumbosacral junction present moderate spondylosis formation. Both coxofemoral joints present moderate osteophyte new bone formation.

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and is empty.

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with normal content.

RADIOGRAPHIC DIAGNOSIS

- Degenerative osteoarthritis coxofemoral joints bilaterally
- Spondylosis deformans lumbosacral junction

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

No clinically relevant abnormality is appreciated. There is no evidence of abnormal bulging of the abdominal wall or signs for abdominal mass lesion.
