

PATIENT

Pixie MacGrath

PRESENTING CLINICAL SIGNS

Pixie was vomiting on and off for the last few weeks. less active

SPECIES

Feline

RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

An overview study including the thorax and abdomen in three imaging planes is provided for review. Images are provided in JPEG file format.

BREED

Domestic Short Hair

Thorax

The surrounding bony structures are within normal limits.

SEX

FS

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

12 Years

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

Brittany Glen Animal
Hospital

Abdomen

The surrounding bony structures are within normal limits.

REFERRING VET

Dr. Boktor

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE

49498

The liver is appropriate in position, size and presents uniform opacity.

The splenic head is in the anticipated position and within normal limits for size and opacity.

DATE

1-11-22

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

**PATIENT**

Pixie MacGrath

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

SPECIES

Feline

- Normal thorax
- Normal abdomen

RADIOGRAPHIC DIAGNOSIS**BREED**

Domestic Short Hair

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax and abdomen is negative for pathology. Complementing workup by an abdominal ultrasound examination can be used for further assessment of the architecture of the abdominal organs and screen for mural changes of the gastrointestinal tract indicating chronic inflammation or neoplastic infiltration. If not done so yet, recommend complementing workup by complete blood work including T4.
