

PATIENT PRESENTING CLINICAL SIGNS

Max Orozco Over Christmas P did have a week where was not eating and vomiting, did resolve. Then P vomited on Thursday and no interest in wet food on Friday although has free access to dry. Tx with SQ fluids, Cerenia and Gastrafate. Doing better this morning.

SPECIES Abnormal PE/Chem/CBC/UA Results: BUN 40 H, Neut 9656 H, Eos 2040 H

Feline **RADIOGRAPHIC STUDY OF THE ABDOMEN**

A radiographic study of the abdomen in three imaging planes is provided for review.

BREED RADIOGRAPHIC FINDINGS

DSH The surrounding bony structures are within normal limits.

SEX No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

Male Neutered The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

AGE The liver is appropriate in position, size and presents uniform opacity.

2 Years The splenic head is in the anticipated position and within normal limits for size and opacity.

INTERPRETED BY Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and presents normal content.

HOSPITAL NAME The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Boca Park Animal Hospital

The colon is seen in the expected position and presents with appropriate content.

REFERRING VET RADIOGRAPHIC DIAGNOSIS

- Normal abdomen

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE The radiographic study is negative for pathology. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction – a mild to moderate amount of ingesta is seen throughout the gastrointestinal tract. If clinical signs reoccur, consider complementing workup by an abdominal ultrasound examination to rule out infiltrative changes of the gastrointestinal tract.
