PRESENTING CLINICAL SIGNS

History: Pet presented today for a dental cleaning with CT to evaluate oral health

COMPUTED TOMOGRAPHIC STUDY OF THE SKULL

A high-resolution plain CT study of the viscerocranium is provided for review.

COMPUTED TOMOGRAPHIC FINDINGS

Triadan 101, 102, 104, 105, 106, 108, 109, 110, 205-210, 301, 305, 310, 311, 401, 405, 402, 407, 410 and 411 are absent. Triadan 103, 107, 204, 207, 303, 308 present a significant widening of the periodontal space. Furcation of triadan 309 is appreciated. The remaining teeth present generalized horizontal bone loss.

The nasal cavity presents the expected aerated spaces between thin & even conchae and turbinates with smooth mucosal lining.

The volume of the left ocular bulb is significantly decreased and presents an irregular mineralized intraocular structure.

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Generalized periodontal disease, most pronounced triadan 103, 107, 204, 207, 303, 308
- Multiple absent teeth, see above
- Left sided microphthalmos and cataract of the lens – possible preceding blunt ocular trauma or chronic uveitis

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study reveals advanced periodontal disease of multiple teeth and complete dental workup has already been performed, regarding the history.
