

PATIENT

Charlie Martone

PRESENTING CLINICAL SIGNS

chronic, intermittent cough.
Abnormal PE/Chem/CBC/UA Results: Sinus arrhythmia. Lungs clear and eupnic,

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

Radiographs of the thorax in three imaging planes are provided for review.

BREED

CKCS

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

SEX

Male

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE

5 Months

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME

Pinebrook Animal
Hospital

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

RADIOGRAPHIC DIAGNOSIS

- Normal thorax

REFERRING VET

Dr. Britt Dubil

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax presents without pathological findings. Anyway normal thoracic radiographs do not rule out possible underlying tracheitis or bronchitis – either inflammatory non-infectious (e.g. allergic, eosinophilic) or infectious (e.g. viral, parasitic, bacterial). If clinical signs are refractory to therapy, bronchoscopy including BAL would be ideal as advanced diagnostic test.
