

PATIENT

Auggie Seligmuller

PRESENTING CLINICAL SIGNS

1 wk history of limping right hind, improvement with rimadyl. No obvious cranial drawer or medial buttress on exam.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE RIGHT STIFLE JOINT

Radiographs of the right stifle joint in two imaging planes are provided for review.

BREED

Sheepdog

RADIOGRAPHIC FINDINGS

The right stifle joint presents smooth osseous margins and without signs for intracapsular swelling.

The patella of both stifle joints is in situ.

The surrounding soft tissue structures of both stifle joints are within normal limits.

SEX

Male

RADIOGRAPHIC DIAGNOSIS

- Normal right stifle joint

AGE

4

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the right stifle joint presents no abnormalities, explaining the right hind limb lameness. Rule out contusion/muscle strain or pathology of the distal aspect of the right hind limb as source for pain as well.
