SPECIES

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

BREED

Radiographs of the abdomen in three imaging planes are provided for review.

Miniature Schnauzer

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

SEX

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

Spayed Female

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

AGE

The liver is appropriate in position, size and presents uniform opacity.

5 Years

The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

HOSPITAL NAME

Alejandro Animal Hospital

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

REFERRING VET

Dra Alexia Simeonidis

RADIOGRAPHIC DIAGNOSIS

- Normal abdomen

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE

The radiographic study of the abdomen presents without abnormalities, there is no evidence of an abdominal mass. Rule out underlying immune mediated disease as source for the laboratory changes.
