

PATIENT PRESENTING CLINICAL SIGNS

Billy Leech was suspicious to have megaesophagus,
Abnormal PE/Chem/CBC/UA Results: unremarkable

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Canine A complete set of radiographs of the thorax and abdomen is provided for review.

BREED RADIOGRAPHIC FINDINGS

Boston Terrier Thorax

The surrounding bony structures are within normal limits.

SEX The extrathoracic soft tissues present homogeneous without abnormalities.

Male Neuter The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

2 Years The esophagus contains a mild amount of gas.

INTERPRETED BY Sebastian Schaub, DVM
Dr. med. vet. DipECVDI The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME St. Catharines Animal Hospital The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

REFERRING VET Abdomen

Dr. Boctor The surrounding bony structures are within normal limits.

INVOICE No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

49822 The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

DATE The liver is appropriate in position, size and presents uniform opacity.

1-25-22 The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

PATIENT

Billy Leech

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

The stomach is in its anticipated position and presents normal content.

SPECIES

Canine

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

BREED

Boston Terrier

RADIOGRAPHIC DIAGNOSIS

- Normal thorax
- Normal abdomen

SEX

Male Neuter

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax and abdomen is negative for disease. There is no evidence of pathological esophageal dilation. If there is evidence of dysphagia, a fluoroscopic swallowing study can be considered as next diagnostic step.
