

## PATIENT

Luna Zinn

## SPECIES

Feline

## BREED

DSH

## SEX

FS

## AGE

8Y

## WEIGHT

7.93

## INTERPRETED BY

Sebastian Schaub, DVM  
Dr. med. vet. DipECVDI

## IMAGING PERFORMED BY

Mobile Pet Imaging

## HOSPITAL NAME

Mobile Pet Imaging

## REFERRING VET

Armstrong

## INVOICE

73463

## DATE

1-26-26

## PRESENTING CLINICAL SIGNS

Patient presented with history of constant drooling. Extraction of an infected tooth was performed during recent dental cleaning procedure.

## COMPUTED TOMOGRAPHY OF THE SKULL

A high resolution pre- and post-contrast CT study of the skull is provided for review.

## COMPUTED TOMOGRAPHIC FINDINGS

The tooth elements 206 and 207 are absent.

The nasal cavity presents the expected aerated spaces between thin & even conchae and turbinates with smooth mucosal lining.

Both temporomandibular joints present congruent joint spaces with even subchondral bone surfaces and are considered within normal limits.

Both tympanic bullae are aerated, the mucosal lining is not seen, the bony wall is smooth and thin. The external ear canals are within normal limits.

The brain presents no deviation from normal anatomy and symmetry. The brain parenchyma is homogeneous and within normal limits for attenuation and distribution of contrast enhancement. The ventricular system is non-dilated and symmetric.

The submandibular and medial retropharyngeal lymph nodes are small and elongated with a normal short-to-long-axis-ratio is < 0.5, the attenuation and contrast enhancement pattern is uniform.

## COMPUTED TOMOGRAPHIC DIAGNOSIS

- Absent triadan 206 and 207

## INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study of the skull reveals no clinically relevant abnormalities – the clinically described ulceration along the dorsal aspect of the tongue cannot be appreciated. Anyway, recommend biopsy to rule differentiate between infectious causes (e.g. Calicivirus infection) versus early stage of neoplastic disease (e.g. squamous cell carcinoma, melanoma).

**The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.**

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
