

PATIENT

Hazel Ferrary-Giannone

PRESENTING CLINICAL SIGNS

Hx of cough worst in am. On two consecutive courses of Clavamox for suspect URI. Still coughing at least once a day.

SPECIES

Canine

RADIOGRAPHIC STUDY OF THE THORAX

Radiographs of the thorax in three imaging planes are provided for review.

BREED

Cavapoo

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits; the growth plates are age related open.

The extrathoracic soft tissues present homogeneous without abnormalities.

SEX

F

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

AGE

17 Weeks

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

Bergen County
Veterinary Center

RADIOGRAPHIC DIAGNOSIS

- Normal thorax

REFERRING VET

Dr. Moore

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study presents without abnormalities. However, negative radiographs do not rule out tracheitis/bronchitis completely. If clinical signs persist, complementing workup by bronchoscopy including BAL would be ideal.
