

PATIENT PRESENTING CLINICAL SIGNS

Barney Naranjo hx of coughing for about 1 year. hacking noted. owner noticed has gotten worse in past 2 weeks
 Abnormal PE/Chem/CBC/UA Results: heart / lungs - clear, no murmur

SPECIES RADIOGRAPHIC STUDY OF THE THORAX & ABDOMEN

Feline An overview study including the thorax and abdomen in three imaging planes are provided for review.

BREED RADIOGRAPHIC FINDINGS

Siamese Thorax

The surrounding bony structures are within normal limits.

SEX The extrathoracic soft tissues present homogeneous without abnormalities.

NM The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

AGE The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

11 Years, 1 Month

INTERPRETED BY An increased visibility of the bronchial walls, most accentuated in the ventral aspect of the caudal lung lobes is noted.

Sebastian Schaub, DVM
 Dr. med. vet. DipECVDI

The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

HOSPITAL NAME The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

DPC Veterinary Hospital

Abdomen

The surrounding bony structures are within normal limits.

REFERRING VET No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

Dr. Feldt

The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

INVOICE The liver is appropriate in position, size and presents uniform opacity.

49951

The splenic head is in the anticipated position and within normal limits for size and opacity.

DATE Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

1-29-22

The stomach is in its anticipated position and presents normal content.

**PATIENT**

Barney Naranjo

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

The colon is seen in the expected position and presents with appropriate content.

SPECIES

Feline

RADIOGRAPHIC DIAGNOSIS

- Mild bronchial lung pattern
- Normal abdomen

BREED

Siamese

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The bronchial pattern might be accentuated by the radiographic algorithm, optimized for the abdomen. Given the history of cough, bronchitis – inflammatory non-infectious (e.g. allergic, eosinophilic) versus infectious (e.g. viral, bacterial, parasitic) – are considerations here.
