

**PATIENT**

Luna Wood

PRESENTING CLINICAL SIGNS

Marked limping left front leg. Bilat shoulder pain. Bilat mild elbow and stifle pain.

SPECIES

K9

RADIOGRAPHIC STUDY OF THE SHOULDER JOINTS

Radiographs of the shoulder joints in two imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

Both shoulder joints present smooth osseous margins with a congruent joint space. The surrounding soft tissue structures are within normal limits. The humeral diaphysis is within normal limits.

Spayed

- Structural normal shoulder joints

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the shoulder joints is negative for pathology, such as OCD, panosteitis. If there is suspicion for pathology of the bicipital tendon or rotator cuff injury, complementing workup by an ultrasound examination of the shoulder joints is recommended. Rule out pain originating from the distal aspects of the front limbs or neck as well.
