RADIOGRAPHIC STUDY OF THE CERVICAL, THORACIC & LUMBAR SPINE

An overview study of the entire spine is provided for review.

BREED

RADIOGRAPHIC FINDINGS

Chihuahua

The osseous and surrounding soft tissue structures of the cervical and thoracic spine present no abnormalities.

SEX

Eight lumbar vertebra are appreciated. The vertebral body of L8 is shortened and presents the same angulation like the sacrum.

Spayed Female

RADIOGRAPHIC DIAGNOSIS

AGE

- Symmetric lumbosacral transitional vertebral, type II

13 Years

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INTERPRETED BY

The radiographic study of the entire spine presents without clinically relevant abnormalities. However, as an overview study was provided, due to inherent oblique projection of the intervertebral disc spaces, narrowing of the intervertebral disc spaces can be missed.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

If clinical signs are refractory to empirical management including pain management and rest, consider complementing workup by cross-sectional imaging.
