

**PATIENT**

Luna (Kitty) Guay

**PRESENTING CLINICAL SIGNS**

History: cat had nodular change in liver (please check your report of abdominal x-ray) . came back last night with rapid shallow breathing and hypothermia , 32 c  
Abnormal PE/Chem/CBC/UA Results: unremarkable

**SPECIES**

Feline

**RADIOGRAPHIC STUDY OF THE THORAX**

Radiographs of the thorax in three imaging planes are provided for review.

**BREED**

DSH

**RADIOGRAPHIC FINDINGS**

The surrounding bony structures are within normal limits.

**SEX**

Spayed Female

The extrathoracic soft tissues present homogeneous without abnormalities.

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

**AGE**

7 Years

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected. The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

**INTERPRETED BY**

Sebastian Schaub,  
DVM Dr. med. vet.  
DipECVDI

**RADIOGRAPHIC DIAGNOSIS**

- Normal thorax

**HOSPITAL NAME**

St. Catharine's AH

**INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS**

The radiographic study of the thorax reveals no abnormalities and there are no significant radiographic changes between the two sets of radiographs, dated 1/4/23 and 1/5/23, but a mild decreased radiopacity of the lung field that can be due to mild different technique or indicate hypovolemia. Although there are no overt changes of the cardiovascular system, a cardiac echo might be used to rule out underlying cardiac disease.
