

PATIENT

Zero Nimeth

SPECIES

Canine

BREED

Rhodesian Ridgeback

SEX

Neutered Male

AGE

8 Years

WEIGHT

103.1 pounds

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

IMAGING PERFORMED BY

Lillian Harper

HOSPITAL NAME

Scottsdale Veterinary
Clinic

REFERRING VET

Dr. Samantha Gans

INVOICE

13087

DATE

01/09/26

PRESENTING CLINICAL SIGNS

HX chronic bilateral mucoïd nasal discharge. Got a little improved but then worsened again while on Doxycycline that was finished yesterday. Lots of coughing and sneezing. Diseased 108 and 208

Abnormal PE/Chem/CBC/UA Results: HX chronic bilateral mucoïd nasal discharge. Got a little improved but then worsened again while on Doxycycline that was finished yesterday. Lots of coughing and sneezing.

COMPUTED TOMOGRAPHIC STUDY OF THE SKULL

A high-resolution plain CT study of the viscerocranium is provided for review.

COMPUTED TOMOGRAPHIC FINDINGS

The pictured parts of the dentition are complete and unremarkable in all jaw quadrants.

The nasal cavity is obliterated by soft tissue attenuating material that is attached to the nasal conchal structures.

COMPUTED TOMOGRAPHIC DIAGNOSIS

- Rhinitis

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The CT study is consistent with rhinitis, and the presumptive diagnosis is non-specific rhinitis (e.g. allergic, lymphocytic plasmocytic, eosinophilic). There is no evidence of nasal mass, foreign body, mycotic rhinitis or odontogenic rhinitis. Rhinoscopy including biopsy can be used for further workup.

The information and recommendations provided are based on the images presented by the referring veterinarian/sonographer. No evaluation can be communicated regarding pathology that was not visible in the image/video clips provided.

Thank you for this referral. If the clinical or image interpretation does not parallel your findings or if I can be of any further assistance please contact me.
