

PATIENT

Emma McGarry

PRESENTING CLINICAL SIGNS

SQ mass effect dorsal caudal cervical region. Movable, non painful metastatic check

RADIOGRAPHIC STUDY OF THE THORAX

SPECIES

Radiographs of the thorax in three imaging planes are provided for review.

Canine

RADIOGRAPHIC FINDINGS

The vertebral endplates T5/T6 present mild spondylosis formation.

BREED

The extrathoracic soft tissues present homogeneous without abnormalities.

Great Dane

The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

SEX

The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

MN

The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

AGE

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

5 Years

The lung parenchyma presents the expected architecture and a generalized mild to moderate unstructured interstitial lung pattern; the intrapulmonary vascular branching is seen up to the third order lung vessels.

INTERPRETED BY

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

HOSPITAL NAME

Animal Surgical
Center

RADIOGRAPHIC DIAGNOSIS

- Unstructured interstitial lung pattern
- Spondylosis deformans T5/T6
- No evidence of pulmonary metastatic disease

REFERRING VET

Banfield

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The radiographic study of the thorax presents without abnormalities. The unstructured interstitial lung pattern is likely accentuated by hypoinflation of the lung parenchyma. The odds for 'real' interstitial lung pattern are considered low - potentials would include fibrosis, pneumonitis (inflammatory versus infectious), systemic disease (e.g. pancreatitis, IMHA, renal disease), (neoplasia).
