

PATIENT PRESENTING CLINICAL SIGNS

Payton Nebel went to our local ER clinic Sept 21,2022 with complaint of Vomiting and Diarrhea. CBC/ CHEM/ UA / T4 all normal. Radiographs taken there reveal possible liver mass. Treated with sucralfate , omeprazole, diarrhea control gel, and cerenia

SPECIES Abnormal PE/Chem/CBC/UA Results: Also ultrasounded abdomen today, enlarged (mildly, bilateral) adrenals Gassy intestines. Recommending GI work up to Owner (B12, folate/ cobalamin and possible biopsy of intestines)

Canine

RADIOGRAPHIC STUDY OF THE ABDOMEN

BREED Radiographs of the abdomen in three imaging planes are provided for review.

Labrador Retriever
Mix

RADIOGRAPHIC FINDINGS

A TPLO implant is appreciated at the medioproximal aspect of the right tibia.

SEX No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

FS The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

AGE The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

12

INTERPRETED BY Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

Sebastian Schaub, DVM
Dr. med. vet. DipECVDI

The stomach is in its anticipated position and is empty.

HOSPITAL NAME The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

Northshore
Veterinary Hospital

The colon is seen in the expected position and is empty and mildly distended by gas. The colon appears rigid.

RADIOGRAPHIC DIAGNOSIS

- REFERRING VET**
- Empty adynamic appearing colon
 - Empty stomach

Brita Kiffney

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

INVOICE The radiographic pattern of the gastrointestinal tract in combination with the presenting clinical signs is suggestive for underlying gastroenteritis. There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. Complementing workup by blood work including cpl is beneficial to rule out pancreatitis.
