

PATIENT PRESENTING CLINICAL SIGNS

Cooper Swann History: sudden onset of weakness , muscle tremors
Abnormal PE/Chem/CBC/UA Results: only Low TT4

SPECIES RADIOGRAPHIC STUDY OF THE THORAX, ABDOMEN AND PELVIS

Canine A complete set of radiographs of the thorax and abdomen is provided for review.

BREED RADIOGRAPHIC FINDINGS

Golden Retriever The body condition score is 9/9

SEX Thorax

Neutered Male The surrounding bony structures are within normal limits.
The extrathoracic soft tissues present homogeneous without abnormalities.

AGE The heart is of normal size and shape, there is no evidence of cardiac chamber or vascular enlargement. The pulmonary vasculature is within normal limits.

6 Years The cranial mediastinum presents the expected soft tissue opacity. The mediastinal width is less than twice the width of the vertebral column at the same level.

INTERPRETED BY

Sebastian Schaub, DVM Dr. med. vet. DipECVDI The trachea is normal in diameter and presents the anticipated course. The luminal outline of the trachea is smooth.

The bronchial tree presents with thin walls and tapers uniformly towards the periphery as expected.

HOSPITAL NAME

St. Catharine's AH The lung parenchyma presents the expected architecture and opacity; the intrapulmonary vascular branching is seen up to the third order lung vessels.

REFERRING VET

Dr. Boctor The diaphragm is well delineated with even surface and the expected mild cranial bulging of the diaphragmatic cupola.

Abdomen

INVOICE

The surrounding bony structures are within normal limits. The osseous and soft tissue structures of the pelvis are within normal limits. The coxofemoral joints present a thin Morgan-line, no additional abnormalities.

13740

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

DATE

10/13/21

PATIENT The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

Cooper Swann The liver is appropriate in position, size and presents uniform opacity.

SPECIES The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Canine Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

BREED The stomach is in its anticipated position and presents normal content.

Golden Retriever

The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

SEX

Neutered Male

The colon is seen in the expected position and presents with appropriate content.

RADIOGRAPHIC DIAGNOSIS

AGE

6 Years

- Obesity
- Normal thorax
- Normal abdomen
- Normal pelvis but very mild degenerative changes of the coxofemoral joints

INTERPRETED BY

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

The current set of radiographs of the thorax and abdomen presents without abnormalities explaining the acute clinical signs.
