

**PATIENT**

Daisy Steele

PRESENTING CLINICAL SIGNS

History: Referred to us b/c owner thinks is painful w bilateral forelimbs. Has been licking front paws for some time but was not painful during PE at consult with AHP today (Oct 13/22). Dr Reynolds wants to rule out any other potential causes of discomfort via CT. We are also sending out bloodwork and urinalysis to screen for potential of lyme disease.

SPECIES

Canine

COMPUTED TOMOGRAPHIC STUDY OF THE FRONT LIMBS

A plain CT study of the front limbs in a bone and soft tissue reconstruction is provided for review.

BREED

Golden Doodle

COMPUTED TOMOGRAPHIC FINDINGS

Both shoulder joints present smooth osseous margins and the surrounding soft tissue structures are within normal limits. A vacuum phenomenon is seen in the joint space of both shoulder joints.

SEX

Spayed Female

The elbow joints bilaterally present smooth osseous margins, the medial coronoid process of both elbow joints is well-defined and has a homogeneous density respectively. The soft tissue structures surrounding both elbow joints present no abnormalities.

AGE

7 Years

The osseous and soft tissue structures of the antebrachium and the carpal joints are within normal limits.

The front paws present without abnormalities.

COMPUTED TOMOGRAPHIC DIAGNOSIS**INTERPRETED BY**

- Normal front limbs

Sebastian Schaub,
