

PATIENT PRESENTING CLINICAL SIGNS

Persia Osheroff History: Procedure: Owner reports hematuria for ~ 1 week. Multi cat house . Owner can not touch or medicate. noted inappropriate urination with blood.

SPECIES Abnormal PE/Chem/CBC/UA Results: Hydration: Appropriately hydrated Mentation: BAR, growling, swatting EENT: No nasal discharge; clear no discharge OU; clean no exudate AU; wnl. Oral Cavity: mild dental tartar present Uro/Perineum: N Neurological: Appropriate Bloodwork: Glu 265 (71-159), WBC 18.60 (2.87-17.02), Neu 15.94 (2.30-10-29), rest WNL

Feline

BREED RADIOGRAPHIC STUDY OF THE ABDOMEN

Maine Coon Orthogonal views of the abdomen are provided for review.

SEX RADIOGRAPHIC FINDINGS

Spayed Female The vertebral endplates T11/T12, L6/L7 and L7/S1 present moderate spondylosis formation.Both stifle joints present multiple periarticular mineralizations.

AGE No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.

11 Years 9 Months The serosal detail is maintained throughout the peritoneal and retroperitoneal space.

The liver is appropriate in position, size and presents uniform opacity.

INTERPRETED BY The splenic head is in the anticipated position and within normal limits for size and opacity. The splenic body and tail are considered normal for position, size, shape and opacity.

Sebastian Schaub,
DVM Dr. med. vet.
DipECVDI

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. Granular, faint mineralized material is superimposed on the urinary bladder.

HOSPITAL NAME

DPC Veterinary H The stomach is in its anticipated position and presents normal content.

REFERRING VET

Dr. White The small intestinal loops are of even diameter and non-dilated, a small amount of gas is seen within the small intestinal loops and considered within normal limits.

RADIOGRAPHIC DIAGNOSIS

INVOICE

13878

- Cystolithiasis
- Suspect synovial osteochondromatosis stifle joints bilaterally
- Spondylosis deformans

DATE INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

10/19/21

PATIENT

Persia Osheroff

There is evidence of cystolithiasis with a moderate amount of small cystoliths within the urinary bladder – such as struvite or calcium oxalate. If not done so yet, complete urinalysis is indicated. Dietary or surgical management of the cystolithiasis are considerations, based on the results of the urinalysis.
