Oral cavity: N Musculoskeletal: BCS = 4/9. Ambulatory x 4 Uro/Perineum: No significant lesions Abd/GI: Soft, non-painful. No masses or fluid wave palpated Lymph Nodes: No peripheral lymphadenopathy Neurological: Alert and appropriate. No significant abnormalities Skin: Good hair coat. No ectoparasites seen Mentation: BAR Hydration: N
 Abnormal PE/Chem/CBC/UA Results:

RADIOGRAPHIC STUDY OF THE ABDOMEN

Radiographs of the abdomen in three imaging planes are provided for review.

RADIOGRAPHIC FINDINGS

The surrounding bony structures are within normal limits.

INTERPRETED BY

Sebastian Schaub,
 DVM Dr. med. vet.
 DipECVDI

No abnormalities of the extraabdominal soft tissues are noted. The abdominal wall is smooth and thin.
 The serosal detail is maintained throughout the peritoneal and retroperitoneal space.
 The liver is appropriate in position, size and presents uniform opacity.

HOSPITAL NAME

DPC Veterinary H

The splenic head is in the anticipated position and within normal limits for size and opacity.

Both kidneys are seen and present with normal size, shape, delineation and opacity. The urinary bladder is in its anticipated position. No radiopaque calculi are noted throughout the upper and lower urinary tract.

REFERRING VET

Dr. Rivera

The stomach is in its anticipated position and empty.

The small intestinal loops are of even diameter and generalized mildly distended by gas. The colon is seen in the expected position and presents with appropriate content.

INTERPRETATION OF THE FINDINGS & FURTHER RECOMMENDATIONS

PATIENT

Marty Mur

There is no evidence of radiopaque foreign material or signs for gastrointestinal mechanical obstruction. If clinical signs are refractory to therapy recommend follow up radiographs of the abdomen or a complete abdominal ultrasound examination; in some cases, a high ileus may lack classical radiographic signs of gastrointestinal mechanical obstruction.
